## General Information

Plan Report ID Number	20241018epi
Developer Name	Epididian, Inc.
Product Name(s)	Epididian's CHORUS
Version Number(s)	29.1
Certified Health IT Product List (CHPL) Product Number(s)	15.07.05.3101.EPIV.01.00.0.230331
Developer Real World Testing Page URL	<a href="https://www.epididian.com/legal-directory/onc-product-disclosure/">https://www.epididian.com/legal-directory/onc-product-disclosure/</a>

## Justification for Real World Testing Approach

The Real World Testing Approach will include querying log data to determine the usage of the feature associated with each criteria being tested. For features that generate any type of output, including exports, testing will also include identifying if the output was created and delivered successfully or if any errors were logged. Epididian will report the usage and completion results in the Real World Test Plan Results report.

It is recognized that not all customers will use all features. If it is determined that no customers have utilized a feature associated with a criteria being tested, Epididian will utilize test user account(s) in the CHORUS environment(s) of client(s) that encompass all care settings and run the feature to ensure expected results are received. Epididian will report the outcome of the test run, including successful creation and delivery of any output, in the Real World Test Plan Results report.

The functionality and use cases included in this Test Plan apply to §170.315(b)(10) - Electronic Health Information Export.

## Care Settings

Epididian's CHORUS is an ONC certified product that is sold to primary care, ambulatory care, mental health care, telehealth, and preventative/wellness care settings.

## Standards Version Advancement Process (SVAP) Standards Updates

Epididian's CHORUS does not have any voluntary SVAP updates.

## Milestones – Real World Testing

Date	Milestone
October 15, 2024	2025 Real World Testing Test Plan Submitted
January-December 2025	Quarterly Data Collection for 2025 Reporting
October 2025	2026 Real World Testing Test Plan Submitted
February 1, 2026	2025 Real World Testing Test Results Submitted

## Test Plan

### (b)(10) Electronic Health Information Export

Description of Measurement/Metric	The tester will query CHORUS log data to determine the number of times a user used the Electronic Health Information (EHI) Export feature. The tester will confirm that the EHI Export feature was used only by authorized users and each use successfully generated and delivered files to the user.
Relied Upon Software	N/A
Justification for Measurement/Metric	<p>Epididian will report the number of EHI Exports generated across all clients. This will include a count of uses of the feature across all clients, confirmation that all uses were by an authorized user, a count of successful exports, and a count of export requests that resulted in failure or error.</p> <p>It is recognized that not all customers will use this feature. If it is determined that no customers use the EHI Export feature, then Epididian will utilize test user account(s) to access the CHORUS environment(s) of client(s) that encompass all care settings and run the feature to ensure only authorized accounts are able to use the feature and the export is successfully created and delivered.</p> <p>This approach is intended to demonstrate the real-world volume of exports processed.</p>
Expected Outcomes	<p>Electronic Health Information Export CSV files are successfully requested and generated by any user with the required authorization. CSV files and hyperlink to the export's format are delivered in encrypted, password protected, compressed ZIP format.</p> <p>Error rates will be tracked and trended over time.</p>
Care Settings	Epididian's CHORUS is an ONC certified product that is sold to primary care, ambulatory care, mental health care, telehealth, and preventative/wellness care settings.

## Attestation

This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
